#### Greetings!

Media, digital or print, we cannot escape the fact that we are progressing towards a fully mobile digital world where consumers and business will expect instant access to basic information...from anywhere in the world. Don't knock it! We all have at least one digital communication device on our belt, in our purse or within arm's reach.

**The Technology Gap - The longer you wait...the further you will be left behind...and the more it may end up costing you in the long run.**

Two of the most common questions received by readers have been:

- 1) When should I make a change?
- 2) How can I justify the expense?

In a nutshell, start planning today!

Business owners and Service Executives have to balance multi-operational challenges on a daily basis. Instant access to accurate and timely information is crucial. The longer you wait the more technology advances and the wider the technology gap becomes. As the gap extends so does the cost of upgrading your legacy infrastructure to a current platform.

Mobile Computing Corp has always supported our clients by providing a modular approach that grows with your business. MCC will provide you with options to secure the hardware. Our M-LINX Mobile Worker Suite can provide you with the scalability you need. Start by implementing the Mobile Worker and AVL module so you can wirelessly send and receive work orders and track your assets.

Once you start realizing payback, add the Routing and Scheduling module to help consolidate and streamline your dispatch process.

Modularity helps expedite the M-LINX suite into your organization. The investment will pay for itself through efficiencies and increased customer satisfaction.

As always, I look forward to receiving your questions and feedback.

**Sincerely,**

*Mike*
