

Anytime. Anywhere. Any Device.

M-LINX™ for Paperless Route Delivery

Mobile Computing Corp. Inc's. (MCC) core application is built on the M-LINX™ platform. M-LINX™ is a completely modular suite of products that can be implemented as your operation requires, and configured to align with your specific business process.

Some of the modules M-LINX™ offers to provide you with standardized CONTROL for your operations:

M-LINX™ for Paperless Route Delivery

- Paperless delivery, adjustments, signature collection and error free calculations
- Barcode scanning to enable pickup, delivery and accurate update for every point in between
- Electronic delivery manifest via email

M-LINX™ for Customer Resource Management (CRM)

- Enter and manage customer contracts and delivery schedules
- Wireless dispatch and scheduling
- Set up invoicing and billing routines

M-LINX™ for GPS Tracking and Breadcrumb

 Vehicle, asset and operator tracking with breadcrumb playback

M-LINX™ for Routing and Scheduling Optimization

 Dynamically optimize your route based on predefined business variables and/or emergency situations

M-LINX™ Business Intelligence Reporting

 Unlock the answers that lie within your data to make operational and tactical decisions allowing you to differentiate against your competition

Get Control! MCC is a leading full service provider of real-time Paperless Route Delivery solutions..

Our solutions are focused exclusively on rapidly reducing your tracking and operating costs.

A mobile device will replace your paper based forms, mirroring the familiar fields your Route Personnel have come to rely on. These eForms will allow the operations to collect vital real-time tracking data as it occurs in the field. Errors are virtually eliminated!

Contact our sales team to learn what other modules are available or how we can configure a solution for your operations.
